

Orchestration Report

Status: All tasks completed successfully

Session: 6a45afcf163a13dc7ec9358

Generated: 2026-07-02T01:58:22.524Z

Overview

Metric	Value
Total Tasks	3
Completed	3
Failed	0
Pending	0
Tool Calls	121
Errors	2
Duration	15m 52s

Agent Breakdown

Agent	Tasks
orchestrator	56
coder	45
deployer	20

Summary

Status: All tasks completed successfully

Duration: 15m 52s

Tasks: 3 completed, 0 failed, 0 pending

Tool calls: 121 (2 tool errors)

- Errors by tool: mongodb_aggregate(2)

Findings

Results (3)

[orchestrator] Execute skill: EMULATOR_SPEC

Both tasks are still pending. Let me wait and poll again for their completion.

Used 55 tool call(s): list_memory_keys, mongodb_list_collections, list_tasks, read_memory, read_memory, read_memory, mongodb_find_one, mongodb_find_one, mongodb_find_one, read_memory, read_memory, mongodb_find_one, mongodb_find_one, list_tasks, mongodb_find_one, mongodb_find_one, mongodb_aggregate, mongodb_aggregate, mongodb_aggregate, mongodb_aggregate, mongodb_aggregate, read_task, read_task, write_task, write_task, write_memory, list_tasks, read_task, read_task, read_task_result, read_task_result, list_tasks, list_tasks, list_tasks, list_tasks, read_task_result

[deployer] Re-verify local subtensor chain connectivity and wallet funding status

All state is persisted. Let me now provide the comprehensive summary report.

 Chain Re-Verification Report: V14-R1 Online Validation

Verification ID: DEPLOY-VERIFY-2026-07-02-001

Timestamp: 2026-07-02T00:38:11Z

Procedure: insignia\_subnet\_tuner

Endpoint Test Results

Endpoint	Source	Status	Error
ws://127.0.0.1:9945	SUBTENSOR_LOCAL_ENDPOINT default	 UNREACHABLE	ECONNREFUSED
ws://127.0.0.1:9946	upstream localnet.sh port	 UNREACHABLE	ECONNREFUSED
ws://127.0.0.1:9933	alternative substrate port	 UNREACHABLE	ECONNREFUSED
ws://10.0.0.193:9945	EMULATOR_SPEC \$4 chain host	 UNREACHABLE	ECONNREFUSED (host not pingable)
ws://10.0.0.193:9946	chain host upstream port	 UNREACHABLE	ECONNREFUSED (host not pingable)
ws://172.17.0.1:9945	Docker bridge gateway	 UNREACHABLE	ECONNREFUSED
ws://172.17.0.1:9946	Docker bridge upstream	 UNREACHABLE	ECONNREFUSED
wss://entrypoint-finney.opentensor.ai:443	public mainnet	 CONNECTED	Block #8529786
wss://test.finney.opentensor.ai:443	public testnet	 CONNECTED	Block #7468235

Delta vs Previous Verification (2026-07-01)

- Local chain status: UNCHANGED — Still all ECONNREFUSED on all 7 endpoints

- **Chain host 10.0.0.193: NOT PINGABLE** — The host itself is unreachable from this container (172.17.0.3), suggesting either the host is down, on a different network segment, or firewalled
- **Public networks: HEALTHY** — Mainnet +8 blocks, testnet +791 blocks since last check
- **No subtensor Docker containers or images** present on this host
- **No SUBTENSOR\_LOCAL\_ENDPOINT** env var configured
- **No localnet scripts or docker-compose files** found

Environment Context

Item	Value
Container IP	172.17.0.3
Docker bridge GW	172.17.0.1
Docker available	Yes
Bittensor SDK	10.5.0
btcli in PATH	No
Subtensor containers	None
Subtensor images	None

Verdict

 **LOCAL\_CHAIN\_STILL\_UNREACHABLE** — V14-R1 online validation **BLOCKED**

What Was NOT Verified (blocked by chain unreachability)

1.  Block height and sync status of local chain
2.  INSIGNIA subnet registration (netuid)
3.  Neuron count (target: 13 = 1 validator + 12 miners)
4.  Wallet balances for 14 wallets (insignia-owner, insignia-validator, insignia-miner-0 through -11)
5.  Subnet hyperparameters vs V14-R1-CORRECTED-KP targets

Per §4.2 Compliance

> "The chain already exists on \<chain-host\>, so the sequence connects and verifies rather than provisioning a chain."

 **Complied** — I did NOT attempt to `docker compose up` a new chain. The deployer's role is to **CONNECT** and **VERIFY**, not provision.

Recommendation to Orchestrator

**Proceed with OFFLINE-ONLY validation.** The local subtensor chain has been unreachable for 2+ consecutive verifications (2026-07-01 and 2026-07-02). The chain host (10.0.0.193) is not even pingable, suggesting it may be on a different network or powered off.

**Required ops intervention:**

1. Start/restart the subtensor node on 10.0.0.193
2. Open firewall rules for 10.0.0.193:9945 from the agent container (172.17.0.3)
3. Set `SUBTENSOR_LOCAL_ENDPOINT` env var once a working endpoint is identified

**State Persistence**

-  `/app/state/deployer_state.json` — Updated (v5.0)
-  `/app/state/chain_connectivity_report.json` — Updated (CCR-1782952661252)
-  Shared memory `deployer_state` — Updated
-  Shared memory `chain_verification_v14R1` — Written
