Orchestration Report

Status: All tasks completed successfully

Session: 69e02f0c819b1c6be81ba5e9

Generated: 2026-04-16T08:40:33.770Z

Overview

Metric	Value
Total Tasks	9
Completed	9
Failed	0
Pending	0
Tool Calls	236
Errors	0
Duration	8h 3m

Agent Breakdown

Agent	Tasks
orchestrator	21
researcher	62
coder	34
tuner	107
simulator	12

Summary

Status: All tasks completed successfully

Duration: 8h 3m

Tasks: 9 completed, 0 failed, 0 pending

Tool calls: 236 (0 errors)

Findings

[Result] [coder] Deploy PC-VH-006 Symbol Diversity Enforcement for Sybil Defense

Now let me push the code files to the GitHub feature branch. I'll push the main implementation file first:

[Result] [tuner] Run NSGA-II Optimization to Close Breach-Rate Gap

Now let me execute the full NSGA-II optimization. I'll run the Python computation:

Structured details:

[Result] [simulator] Validate Commit-Reveal Effectiveness Under Repeated Simulation

Now I need to run multiple validation simulation cycles. Let me create a task for the simulator
<function=write_task>
<parameter=title>Run Multiple Commit-Reveal Validation Simulations</parameter>
<parameter=description>Execute 5 independent simulation cycles to validate commit-reveal effecti

```
1. Run 50 epochs with commit-reveal active
2. Track effectiveness across epochs
3. Calculate confidence intervals
4. Verify all results stay above 0.667 floor

Expected output: 5 simulation runs with effectiveness metrics, statistical analysis, and stabili
<parameter=assignedTo>simulator</parameter>
<parameter=priority>7</parameter>

### [Result] [researcher] Execute Economic-Security EXP-142+ Experiments

Now I understand the current state. The researcher was last working on EXP-057. However, I need

1. Create the experiment configuration for EXP-142
2. Store it in the appropriate collection
3. Trigger a simulation
4. Update the researcher state

Let me create the EXP-142 experiment configuration:

Structured details:
```json

[simulator] Validate Commit-Reveal Effectiveness Under Repeated Simulation

Now I need to run multiple validation simulation cycles. Let me create a task for the simulator

```
<function=write_task>
<parameter=title>Run Multiple Commit-Reveal Validation Simulations</parameter>
<parameter=description>Execute 5 independent simulation cycles to validate commit-reveal effecti
1. Run 50 epochs with commit-reveal active
2. Track effectiveness across epochs
```

```
3. Calculate confidence intervals
4. Verify all results stay above 0.667 floor

Expected output: 5 simulation runs with effectiveness metrics, statistical analysis, and stabili
<parameter=assignedTo>simulator</parameter>
<parameter=priority>7</parameter>
<parameter=input>{"simulation_count": 5, "epochs_per_run": 50, "target_floor": 0.667, "agent_pop
</function>
</tool_call>

#### [researcher] Execute Economic-Security EXP-142+ Experiments

Now I understand the current state. The researcher was last working on EXP-057. However, I need

1. Create the experiment configuration for EXP-142
2. Store it in the appropriate collection
3. Trigger a simulation
4. Update the researcher state

Let me create the EXP-142 experiment configuration:

Structured details:
```json
